                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present peptide binds the thrombopoietin receptor (TR), has a molecular weight of less than 8000 Da and a TR binding affinity as expressed by an IC50 of no more than about 100 microw. It can be used to treat disorders which are susceptible to treatment with a thrombopoietin agonist, preferably haematological disorders and thrombocytopaenia resulting from chemotherapy, radiation therapy or bone marrow transfusions. It can also be used diagnostically, e.g. to investigate the mechanism of thrombopoietin signal transduction and receptor activation, or to maintain the proliferation and growth of thrombopoietin dependent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Thrombopoietin receptor; binding peptide; treatment; agonist; haematological disorder; thrombocytopaenia; chemotherapy; radiation therapy; bone marrow transfusion; diagnosis; signal transduction; receptor activation; cell culture.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present peptide, which binds the thrombopoietin receptor (TR), c used to treat disorders which are susceptible to treatment with a thrombopoietin agonist, preferably haematological disorders and thrombocytopaenia resulting from chemotherapy, radiation therapy or marrow transfusions. It can also be used diagnostically, e.g. to investigate the mechanism of thrombopoietin signal transduction and receptor activation, or to maintain the proliferation and growth of thrombopoietin dependent cell lines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           inhibitor; erythropoietin; thrombopoietin; interleukin 1;
cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor;
vascular endothelial growth factor; matrix metalloproteinase; asthma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EFO; TFO; CTLA4; mimetic; IL-1; TNF; antagonist; MMP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 19
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Peptides and peptide mimetics which bind to and activate the thrombopoietin receptor - useful in treatment of haematological disorders, esp. thrombocytopenia resulting from chemotherapy, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Dower WJ,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       rc (x1)a-r1-(x2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-p1, -(L1)c-p1-(L2)d-p2, -(L1)c-p1-(L2)d-p2, -(L1)c-p1-(L2)d-p2, -(L1)c-p1-(L2)d-p2, -(L1)c-p1-(L2)d-p2, -(L1)c-p1-(L2)d-p2-(L3)e-p3, or -(L1)c-p1-(L2)d-p2-(L3)e-p3-(L4)f-p4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently 1 inkers; and a, b, c, d, e, and f = are each independently 0 or 1, provided that at least 1 c, d, e, and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, compositions are useful for treating cancer, asthma, compositions are useful for treating cancer, asthma, a pab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA6943 to AAA6926 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the cempolification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           transplantation and to prevent thrombocytopenia in patients at risk. The sequences are used to treat and prevent haematological disorders including thrombocytopenia and platelet disorders. They are used in vitro as unique tools for understanding the biological role of thrombopietin (TPO) and to develop other compounds that bind to and activate the TPO receptor. The peptides can be used to detect TPO receptors on living cells and fixed cells, in biological fluids, in tissue homogenates, and in purified or natural biological materials. They may also be used for in set in praising fluorescences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    of activating thrombopoietin receptors in cells comprise contacting to cells with effective amounts of peptides and peptide mimetics attache hydrophilic polymers. The methods are used to treat thrombocytopenia as that due to chemotherapy, radiation therapy or bone-marrow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        situ staining, fluorescence-activated cell sorting, Western blotting enzyme-linked immunosorbent assay (RLIAB). In addition, the peptides be used for in vitro expansion of meggakaryocytes and their committed progenitors alone or in conjunction with additional cytokines
                                                                                                                                                                                                                                                                                                    Homo sapiens

They are used in vitro as unique tools for understanding the biological role of thrombocoletin (TPO) and to develop other compounds that bind to and activate the TPO receptor. The peptides can be used to detect TPO receptors on living cells and fixed cells, in biological fluids, in tissue homogenates, and in purified or natural biological materials. They may also be used for in situ staining, fluorescence-activated cell sorting, Western blotting and enzyme-linked immunosorbent assay (BLISA). In addition, the peptides can be used for in vitro expansion of megakaryocytes and their committed progenitors alone or in conjunction with additional cytokines
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequences AAU25815-AAU26049 represent peptides and peptide mimetics that bind to and activate the human thrombopoietin receptor (TPO-R). Methods of activating thrombopoietin receptors in cells comprise contacting the cells with effective amounts of peptides and peptide mimetics attached to hydrophilic polymers. The methods are used to treat thrombocytopenia such as that due to chemotherapy, radiation therapy or bone-marrow transplantation and to prevent thrombocytopenia in patients at risk. The

Disclosure; Col 65-66; 128pp; English

of activating thrombopoletin receptors in cells comprise contacting the cells with effective amounts of peptides and peptide mimetics attached to hydrophilic polymers. The methods are used to treat thrombocytopenia such as that due to chemotherapy, radiation therapy or bone-marrow transplantation and to prevent thrombocytopenia in patients at risk. The sequences are used to treat and prevent haematological disorders including thrombocytopenia and plattelet disorders. They are used in vitro as unique tools for understanding the biological role of thrombopoietin (TPO) and to develop other compounds that bind to and activate the TPO ceptor. The peptides can be used to detect TPO receptors on living cells and fixed cells, in biological fluids, in tissue homogenates, and in purified or natural biological materials. They may also be used for in still staining, fluorescence-activated cell sorting, Western blotting and cenzyme-linked immunosorbent assay (ELISA). In addition, the peptides can be used for in vitro expansion of megakaryocytes and their committed progenitors alone or in conjunction with additional cytokines

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cultilities and retrictive activities. (I) can be used as a therapeutic or prophylactic agent as well as for screening purposes. (I) is useful for diagnosing diseases characterised by dysfunction of their associated protein of interest, for identifying normal or abnormal proteins of interest, for identifying normal or abnormal proteins of interest in a biological sample. Additionally, (I) is useful proteins of interest in a biological sample. Additionally, (I) is useful proteins of interest in a biological sample. Additionally, (I) is useful proteins of interest in a biological sample. Additionally, (I) is useful for treating inflammatory and autoimmune diseases, tumour growth, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders, infertility, and neurological degenerative diseases. (I), comprising EPO-mimetic compounds are useful for treating disorders characterised by low red blood cell levels such as anaemia. The TPO-mimetic comprising compounds are useful for treating conditions that involve an existing megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet deficiency or an expected megakaryocyte/platelet to deficiency, such as thrombocytopaenia, aplastic anaemia, metastatic tumour which result in thrombocytopaenia, systemic lupus erythematosus, and Fanconi's syndrome. ABB72403 to ABB73426 and ABJ35655 to ABJ35777 represent amino acid and nucleic acid sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a vehicle-peptide molecule (I) or its multimers. (I) can have antiinflammatory, antitumour, immunosuppressive, cytostatic, antirheumatic, antiarthritic, antidiabetic, ophthalmological, antianaemic, anorectic, antiinfertility, haemostatic, dermatological and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel vehicle-peptide molecule or its multimers useful for treating inflammatory and autoimmune diseases, cancer, rheumatoid arthritis, diabetic retinopathy, obesity, sleep disorders and infertility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mimetic; CDR mimetibody; gene therapy; transgenic; immune;

Accordingly, they exhibit immunomodulator, cardiant, antimicrobial, cytostatic and neuroprotective activities. This peptide sequence is a TPO mimetic peptide sequence used to make a mimetibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   portions or variants thereof. Specifically, it refers to an antibody fragment where a protein has been inserted into, or replaces a portion of, one or more CDR regions, such that each CDR mimetibody comprises at least one portion of a heavy chain or light chain variable region, while the province of the comprises at least one human framework region and at least one justeff comprises at least one human framework region and at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             that can be useful in gene therapy and the generation of transgenic plants and animals. Furthermore, the CDR mimetibody is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       useful for preparing a composition for treating e.g., cardiovascular or neurologic disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              which encode them), compositions, methods and uses. The invention may be useful for the development of compounds with an immunosuppressive, cardiovascular, cardiant, hypotensive, neuroprotective, nootropic, antibacterial, virucide or fungicide activity. In addition, the disclosed sequences may prove useful for gene therapy. The CH1-deleted minetibody is useful for diagnosing or treating a disease condition in a cell, tissue, organ or animal, specifically for modulating, treating, alleviating, preventing the incidence or reducing the symptoms of an immune, cardiovascular (for example arrhythmia, hypertension or heart failure), or neurodegenerative (for example multiple sclerosis, dementia conditions, or infectious diseases (for example bacterial, viral or fungal infection). The present sequence is that of a peptide which may be used during the creation of a mimetibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

The methods and compositions of the present invention are useful for the diagnosis, prevention and/or treatment of diseases or conditions associated with aberrant expression or activity of the CH1 deleted mimethody, such as a bone or joint, cardiovascular, dental or oral, dermatological, ear, nose or throat,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      endocrine, metabolic, gastrointestinal, gynaecological, hepatic, obstetric, haematologic, immunological, allergic, infectious, musculoskeletal, oncological, neurological, nutritional, ophthalmologic, pediatric, psychiatric, renal or pulmonary disorders. The present sequence is that of a peptide which may be used during the creation of a mimetibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New CH1 deleted mimetibody polypeptide and nucleic diagnosing, preventing or treating cardiovascular, endocrine, gastrointestinal, gynecologic, infectiou nutritional disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        which encode them), compositions, methods and uses. The inventio useful for the development of compounds with an osteopathic, cardiovascular-Gen, dermatological-Gen, auditory, endocrine-Gen,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Heavner GA,

a stimulator of proliferation, differentiation and maturation of chaematopoietic cells, and a stimulator of haematopoietis. (I) is useful ce for stimulating proliferation, differentiation or growth of promegakaryocytes or megakaryocytes, where (I) is contacted with ceromegakaryocytes or megakaryocytes, which results in increased platelet promegakaryocytes or megakaryocytes, which results in increased platelet components. (I) with a region where amino acid residues corresponding to component of the CDR is replaced with an EPO mimetic, or which has one or component of the CDR is replaced with an EPO mimetic, or which has one or component of the c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes an immunoglobin molecule or its fragment (I) comprising a region where amino acid residues corresponding to at least a portion of the complementary determining region (CDR) are replaced or fused with biologically active peptides e.g. a peptide mimetic such as an erythropoietin (EPO) or thrombopoietin (TPO) mimetic, that is flanked with proline at its carboxy terminus. (I) has antianaemic, haemostatic and nephrotropic activities, and can be used as a stimulator of proliferation, differentiation and maturation of haematopoietic cells, and a stimulator of haematopoiesis. (I) is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         residues corresponding determining region are thrombopoetin mimetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A novel immunogen molecule comprising a region in which amino active residues corresponding to at least a portion of the complementary determining region are replaced or fused with an erythropoietin of the complementary determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are replaced or fused with an erythropoietin or determining region are region.

Further disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The pharmaceutical composition of the invention is useful for treating thrombocytopaenia in an animal, and for increasing megakaryocytes or CC platelets in a patient. The TMP of the invention is useful for treating CC conditions involving a megakaryocyte and/or platelet deficiency, e.g. CC disease conditions involving thrombocytopaenia such as aplastic anaemia, and autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, drug induced immune thrombocytopaenia, and carrier in the compounds demonstrate an autoimmune haemolytic anaemia, Hughe's syndrome and lupoid thrombocytopaenia. The TMP of the invention is also useful for CC maintaining the viability or storage life of platelets and/or improved ability to bind to and/or trigger transmembrane signal through, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to and also exhibit to superior therapeutic properties, such as improved plasma half-life, biological activity and in vivo circulation time. The current sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        with a peptide mimetic selected from an erythropoietin (EPO) mimetic and a thrombopoietin (TPO) mimetic. An immunoglobulin molecule of the invention has immunosuppressive activity, and may have a use in immunotherapy. The immunoglobulin molecule is useful for diagnosing or treating thrombocytopenia as a result of chemotherapy, bone marrow transplantation, or chronic diseases such as idiopathic thrombocytopenia.
                                                                                                                                                                                                                                                                                                transmembrane signaling; mpl receptor; thrombopoietin mimetic peptide; TMP; c-mpl receptor; platelet precursor; megakaryocyte; thrombocytopaenia; aplastic anaemia; autoimmune thrombocytopaenia;
         Novel thrombopoietin mimetic peptides which bind to mpl receptor, which stimulate the production of platelets and/or the production platelet precursors, useful for treating thrombocytopenia.
                                                                                     Min

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              \mathbb{Z} \times \mathbb{R} \times 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that CC binds to the c-mpl (mpl) receptor, and which stimulates the production of platelet precursors, is new. Further CC disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition of matter (II) that binds to an mpl receptor, CC and a pharmaceutical composition of the invention is useful for treating CC pharmocytopaenia in an animal, and for increasing megakaryocytes or CC platelets in a patient. The TMP of the invention is useful for treating CC conditions involving a megakaryocyte and/or platelet deficiency, e.g. CC disease conditions involving thrombocytopaenia such as aplastic anaemia, CC autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, CC autoimmune haemolytic anaemia, Hughe's syndrome and lupoid thrombocytopaenia. The TMP of the invention is also useful for CC maintaining the viability or storage life of platelets and/or cC improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds demonstrate an cimproved ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity and in vivo circulation time. The current sequence represents a TMP peptide of the invention to which a two amino acid "cap" has been added to the carboxy terminal to increase peptide affinity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     RESULT 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

cc thrombocytopaenia in an animal, and for increasing megakaryocytes or platelets in a parient. The TMP of the invention is useful for treating conditions involving a megakaryocyte and/or platelet deficiency, e.g. conditions involving thrombocytopaenia such as aplastic anaemia, cautoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, cautoimmune haemolytic anaemia, Hughe's syndrome and lupoid thrombocytopaenia. The TMP of the invention is also useful for cautoimmune haemolytic anaemia, Hughe's syndrome and lupoid thrombocytopaenia. The TMP of the invention is also useful for camaintaining the viability or storage life of platelets and/or megakaryocytes and its derived cells. The compounds demonstrate an improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior thrombopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelet properties, such as improved plasma half-life, biological activity and in vivo circulation time. The current sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            binds to the c-mpl (mpl) receptor, and which stimulates the production of platelets and/or the production of platelet precursor is new. Further disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The pharmaceutical composition of the invention is useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel thrombopoietin mimetic peptides which bind to mpl receptor, and which stimulate the production of platelets and/or the production of platelet precursors, useful for treating thrombocytopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Disclosure; SEQ ID NO 144; 126pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               maintaining the viability or storage life of platelets and/or megakaryocytes and its derived cells. The compounds demonstrate an improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior thromobopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelet precursors. Further, certain of the compounds also exhibit superior therapeutic properties, such as improved plasma half-life, biological activity and in vivo circulation time. The current sequence represents a peptide-vehicle compound of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      binds to the c-mpl (mpl) receptor, and which stimulates the product platelets and/or the production of platelet precursors, is new. Fur disclosed is a composition of matter (II) that binds to an mpl rece and a pharmaceutical composition comprising (II) and a carrier. The pharmaceutical composition of the invention is useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel thrombopoietin mimetic peptides which bind to mpl receptor, which stimulate the production of platelets and/or the production platelet precursors, useful for treating thrombocytopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  thrombocytopaenia in an animal, and for increasing megakaryocytes or platelets in a patient. The TMP of the invention is useful for treating conditions involving a megakaryocyte and/or platelet deficiency, e.g. disease conditions involving thrombocytopaenia such as aplastic anaemia, autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, autoimmune haemolytic anaemia, Hughe's syndrome and lupoid thrombocytopaenia. The TMP of the invention is also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ct thrombocytopaenia in an animal, and for increasing megakaryocytes or CC platelets in a patient. The TMP of the invention is useful for treating CC conditions involving a megakaryocyte and/or platelet deficiency, e.g. CC disease conditions involving thrombocytopaenia such as aplastic anaemia, CC autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, and in the TMP of the invention is also useful for CC autoimmune haemolytic anaemia, Hughe's syndrome and lupoid thrombocytopaenia. The TMP of the invention is also useful for CC megakaryocytes and its derived cells. The compounds demonstrate an CC improved ability to bind to and/or trigger transmembrane signal through, CC i.e. activating, the mpl receptor the compounds have superior control, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of CC platelet precursors. Further, certain of the compounds also exhibit control therapeutic properties, such as improved plasma half-life, CC biological activity and in vivo circulation time. The current sequence

Further disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The pharmaceutical composition of the invention is useful for treating

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC platelets and/or the production of platelet precursors, is new. Further CC disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The CC pharmaceutical composition of the invention is useful for treating thrombocytopaenia in an animal, and for increasing megakaryocytes or CC platelets in a patient. The TMP of the invention is useful for treating CC conditions involving a megakaryocyte and/or platelet deficiency, e.g. CC disease conditions involving thrombocytopaenia such as aplastic anaemia, CC autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, autoimmune thrombocytopaenia, and for syndrome and lupoid conditions involving thrombocytopaenia syndrome and lupoid conditions the viability or storage life of platelets and/or megakaryocytes and its derived cells. The compounds demonstrate an improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior chromobopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability of the compounds 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel thrombopoietin mimetic peptides which bind to mpl receptor, which stimulate the production of platelets and/or the production platelet precursors, useful for treating thrombocytopenia.
                                                                                                                                                                                                                        transmembrane signaling; mpl receptor; thrombopoietin mimetic pept TMP; c-mpl receptor; platelet precursor; megakaryocyte; thrombocytopaenia; aplastic anaemia; autoimmune thrombocytopaenia; autoimmune haemolytic anaemia; Hughe's syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 36

The TMP of the invention is useful for treating conditions involving a megakaryocyte and/or platelet deficiency, e.g. cd isease conditions involving thrombocytopaenia such as aplastic anaemia, cd autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, at thrombocytopaenia, the TMP of the invention is also useful for cantoimmune haemolytic anaemia, Hughe's syndrome and lupoid committee thrombocytopaenia. The TMP of the invention is also useful for compounds the viability or storage life of platelets and/or cc megakaryocytes and its derived cells. The compounds demonstrate an cc improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior thrombopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RESULT 23
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that binds to the c-mpl (mpl) receptor, and which stimulates the production of platelets and/or the production of platelet precursors, is new. Further disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The pharmaceutical composition invention is useful for treating that binds to approximately composition of the invention is useful for treating that the production of the invention is useful for treating that the production of the invention is useful for treating that the production of the invention is useful for treating that the production of the invention is useful for treating that the production of the invention is useful for treating that the production of the invention is useful for treating that the production of the product
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel thrombopoietin mimetic peptides which bind to mpl receptor, which stimulate the production of platelets and/or the production platelet precursors, useful for treating thrombocytopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               11-OCT-2001; 2001US-0328666P

The TMP of the invention is also useful for maintaining the viability or storage life of platelets and/or megakaryocytes and its derived cells. The compounds demonstrate an improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mmgl receptor the compounds have superior thromobopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelet precursors. Further, certain of the compounds also exhibit superior therapeutic properties, such as improved plasma half-life, biological activity and in vivo circulation time. The current sequence represents a peptide-vehicle compound of the invention.
               Haemostatic; antianaemic; immunosuppressive; platelet; transmembrane signaling; mpl receptor; thrombopoietin mimetic peptide; TMP; c-mpl receptor; platelet precursor; megakaryocyte; thrombocytopaenia; aplastic anaemia; autoimmune thromboovtopaenia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       thrombocytopaenia in an animal, and for increasing megakaryocytes or platelets in a patient. The TMP of the invention is useful for treating conditions involving a megakaryocyte and/or platelet deficiency, e.g. disease conditions involving thrombocytopaenia such as aplastic anaemia, autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that binds to the c-mpl (mpl) receptor, and which stimulates the production of platelets and/or the production of platelet precursors, is new. Further disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The pharmaceutical composition of the invention is useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Min

```
cc thrombocytopaenia in an animal, and for increasing megakaryocytes or platelets in a parient. The TMP of the invention is useful for treating conditions involving a megakaryocyte and/or platelet deficiency, e.g. disease conditions involving thrombocytopaenia such as aplastic anaemia, cautoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, and invention is also useful for autoimmune haemolytic anaemia, Hughe's syndrome and lupoid thrombocytopaenia. The TMP of the invention is also useful for megakaryocytes and its derived cells. The compounds demonstrate an improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior thrombopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of plateletes and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of plateletes and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of plateletes and/or megakaryocytopoietic activity, i.e. the ability and in vitro, the production of plateletes precursors. Further, certain of the compounds also exhibit superior therapeutic properties, such as improved plasma half-life, biological activity and in vivo circulation time. The current sequence corporesents a peptide-linker compound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that binds to the c-mpl (mpl) receptor, and which stimulates the production or platelets and/or the production of platelet precursors, is new. Further disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The pharmaceutical composition of the invention is useful for treating that a pharmaceutical composition of the invention is useful for treating that the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for treating the pharmaceutical composition of the invention is useful for the pharmaceutical composition of the invention is useful for the pharmaceutical composition of the invention is useful for the pharmaceutical composition of the invention is useful for the pharmaceutical composition composition is useful for the pharmaceutical composition is use
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; SEQ ID NO 101; 126pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              platelet precursors, useful for treating thrombocytopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel thrombopoietin mimetic peptides which bind to mpl receptor, which stimulate the production of platelets and/or the production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2003-403101/38
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       11-OCT-2001;

                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                         CC thrombocytopaenia in an animal, and for increasing megakaryocytes or conditions involving a megakaryocyte and/or platelet deficiency, e.g. conditions involving a megakaryocyte and/or platelet deficiency, e.g. conditions involving thrombocytopaenia such as aplastic anaemia, disease conditions involving thrombocytopaenia such as aplastic anaemia, condimmune thrombocytopaenia, drug induced immune thrombocytopaenia, and thrombocytopaenia, conditions is also useful for autoimmune haemolytic anaemia, Hughe's syndrome and lupoid thrombocytopaenia. The TWP of the invention is also useful for megakaryocytes and its derived cells. The compounds demonstrate an improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior chromobopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets properties, such as improved plasma half-life, conjoical activity and in vivo circulation time. The current sequence corporates a peptide-vehicle compound of the invention.
                                                                                                                                                                                                                                                                                       Matches
                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that binds to the c-mpl (mpl) receptor, and which stimulates the production of platelets and/or the production of platelet precursors, is new. Further disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The pharmaceutical composition of the invention is useful for treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             TMP; c-mpl receptor; platelet precursor; megakaryocyte; thrombocytopaenia; aplastic anaemia; autoimmune thrombo autoimmune haemolytic anaemia; Hughe's syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel thrombopoietin mimetic peptides which bind to mpl receptor, which stimulate the production of platelets and/or the production platelet precursors, useful for treating thrombocytopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WPI; 2003-403101/38.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Min H,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    11-OCT-2001; 2001US-0328666P.

The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that CCC binds to the c-mpl (mpl) receptor, and which stimulates the production of platelet precursors, is new. Further CC disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The CC and a pharmaceutical composition comprising (II) and a carrier. The CC pharmaceutical composition of the invention is useful for treating CC platelets in an animal, and for increasing megakaryocytes or CC conditions involving a megakaryocyte and/or platelet deficiency, e.g. CC disease conditions involving thrombocytopaenia such as aplastic anaemia, CC autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, Hughe's syndrome and lupoid chrombocytopaenia. The TMP of the invention is also useful for megakaryocytes and its derived cells. The compounds demonstrate an cegakaryocytes and its derived cells. The compounds demonstrate an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Haemostatic; antianaemic; immunosuppressive; platelet; transmembrane signaling; mpl receptor; thrombopoietin mimetic peptide; TMP; c-mpl receptor; platelet precursor; megakaryocyte; thrombocytopaenia; aplastic anaemia; autoimmune thrombocytopaenia; autoimmune haemolytic anaemia; Hughe's syndrome; lupoid thrombocytopaenia.
improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior thromobopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelet precursors. Further, certain of the compounds also exhibit superior therapeutic properties, such as improved plasma half-life, biological activity and in vivo circulation time. The current sequence represents a peptide-vehicle compound of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel thrombopoietin mimetic peptides which bind to mpl receptor, which stimulate the production of platelets and/or the production platelet precursors, useful for treating thrombocytopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; SEQ ID NO 138; 126pp; English

                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                         CC thrombocytopaenia in an animal, and for increasing megakaryocytes or cplatelets in a patient. The TMP of the invention is useful for treating conditions involving a megakaryocyte and/or platelet deficiency, e.g. cdisease conditions involving thrombocytopaenia such as aplastic anaemia, cdisease conditions involving thrombocytopaenia such as aplastic anaemia, cdisease conditions involving thrombocytopaenia such as aplastic anaemia, cdisease conditions involving induced immune thrombocytopaenia, and induced immune thrombocytopaenia, and continuous anaemia, autoimmune haemolytic anaemia, Hughe's syndrome and lupoid thrombocytopaenia. The TMP of the invention is also useful for compounds the viability or storage life of platelets and/or megakaryocytes and its derived cells. The compounds demonstrate an improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior thrombopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of the compounds also exhibit superior therapeutic properties, such as improved plasma half-life, biological activity and in vivo circulation time. The current sequence of the compounds appears and the production of the compounds also exhibit superior therapeutic properties, such as improved plasma half-life, biological activity and in vivo circulation time. The current sequence

The invention relates to a thrombopoietin mimetic peptide (TMP) (I) that binds to the c-mpl (mpl) receptor, and which stimulates the production of control of platelet sand/or the production of platelet precursors, is new. Further consistent and/or the production of platelet precursors, is new. Further consistent and composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The conditions involving a megakaryocyte and/or platelet for treating conditions involving a megakaryocyte and/or platelet deficiency, e.g. conditions involving thrombocytopaenia such as aplastic anaemia, conditions involving thrombocytopaenia such as aplastic anaemia, contoinmune thrombocytopaenia, drug induced immune thrombocytopaenia, conditions involving thrombocytopaenia such as aplastic anaemia, contoinmune haemolytic anaemia, drug induced immune thrombocytopaenia, conditions the viability or storage life of platelet and/or megakaryocytes and its derived cells. The compounds demonstrate an continuing the viability or storage life of platelets and/or improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior thrombocytopaenia, the mpl receptor trigger transmembrane signal through, i.e. the ability to stimulate, in vivo and in vitro, the production of platelet sand/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelet sand/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelet precursors. Further, certain of the compounds also exhibit superior therapeutic properties, such as improved plasma half-life, considered by the carboxy terminal to increase peptide affinity.

                                                                                           CC binds to the c-mpl (mpl) receptor, and which stimulates the production of comparison of matter (II) that binds to the production of flatelet precursors, is new Further CC and a pharmaceutical composition of matter (II) that binds to an mpl receptor, and sicolosed is a composition of matter (II) that binds to an mpl receptor, and spharmaceutical composition comprising (II) and a carrier. The CC pharmaceutical composition of the invention is useful for treating thrombocytopaenia in an animal, and for increasing megakaryocytes or CC platelets in a patient. The TMP of the invention is useful for treating CC conditions involving a megakaryocyte and/or platelet deficiency, e.g. Cd isease conditions involving thrombocytopaenia such as aplastic anaemia, autoimmune thrombocytopaenia, drug induced immune thrombocytopaenia, autoimmune haemolytic anaemia, Hughe's syndrome and lupoid thrombocytopaenia. The TMP of the invention is also useful for cc megakaryocytes and its derived cells. The compounds demonstrate an cc improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds demonstrate an thrombocytopaenic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in

                                     CC A compound which binds to an mpl receptor comprising a thrombopoietin commetic peptide (TMP) dimer joined by a linker [TMP1-1(L1)] nTMP2], is comew. TMP1 and TMP2 are amino acid sequences varying from at least 10 to C14 residues in length comprising x 2-x1 0, x 2-x1 1, x 2-x1 2, x 2-c CC x 1 4. X 1 = 1, A, V, L, F or R, X 2 = E, D, K or V, X 3 = G or A, X 4 = CC x 1 4. X 1 = 1, A, V, L, F or R, X 2 = E, D, K or V, X 3 = G or A, X 4 = CC x 1 4. X 1 = 1, A, V, L, F or R, X 2 = E, D, K or V, X 3 = G or A, X 4 = CC x 7 4. X 1, or E, X 1 2 = A, I, V, A, F, M, or K; X 1 3 = R, I, V, L, F, CC x, Y 0 = W, Y or F; X 1 2 = A, I, V, L, F, G, S, or G; X 1 3 = R, K, T, V, CC x, Q or G; X 1 4 = A, I, V, L, F, T, R, E, or G; L 1 = Inker comprising CC 1 to 20 amino acids, and n = 0 or 1. The compounds bind to and activate the c-Mpl receptor which mediates the activity of endogenous composition. The TMPs are useful for increasing the production of CC is useful for treatment of diseases which involve thombocytopenia, e.g. Caplastic anaemia, immune thrombocytopenia (ITP), human immunodeficiency constants.
                                                                                                                                                                                                                                                                                                                          Thrombopoietic peptides which activate mpl receptors and increase the production of platelets or platelet precursors, useful for treatment diseases which involve thombocytopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Thrombopoietin; mimetic; TMP; TPO; platelet; megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anemic; dermatological; immunosuppressive; anti-inflammatory; linker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Synthetic

CC binds to the c-mpl (mpl) receptor, and which stimulates the production of platelets and/or the production of platelet precursors, is new. Further CC disclosed is a composition of matter (II) that binds to an mpl receptor, and a pharmaceutical composition comprising (II) and a carrier. The CC and a pharmaceutical composition comprising (II) and a carrier. The CC platelets in a patient. The TMP of the invention is useful for treating CC conditions involving a megakaryocyte and/or platelet deficiency, e.g. CC disease conditions involving thrombocytopaenia such as aplastic anaemia, CC autoimmune haemolytic anaemia, drug induced immune thrombocytopaenia. The TMP of the invention is also useful for megakaryocytes and its derived cells. The compounds demonstrate an CC improved ability to bind to and/or trigger transmembrane signal through, i.e. activating, the mpl receptor the compounds have superior thrombocytopaenia, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of platelets and/or megakaryocytopoietic activity, i.e. the ability to stimulate, in vivo and in vitro, the production of compounds also exhibit to superior therapeutic properties, such as improved plasma half-life, cc biological activity and in vivo circulation time. The current sequence cc represents a peptide-linker compound.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
        CC (I) comprising a region where amino acid residues corresponding to at cleast a portion of the complementary determining region (CDR) are creplaced or fused with biologically active peptides e.g. a peptide cC mimetic such as an erythropoietin (EPO) or thrombopoietin (TPO) mimetic, that is flanked with proline at its carboxy terminus. (I) has can be used as stimulator of proliferation, differentiation and maturation of a stimulator of proliferation, differentiation and maturation of can be used as stimulator of proliferation, differentiation or growth of comegakaryocytes or megakaryocytes, where (I) is contacted with production. (I) with a region where amino acid residues corresponding to a portion of CDR is replaced with an EPO mimetic, or which has one or cC more of its CDRs fused to an EPO mimetic, is useful for increasing the production of CDR is reproducted. (I) is useful for calls or their progenitors. (I) is useful for diagnostics or therapeutics, in cell isolation strategies, and for treating patients suffering from deficiency in cell populations caused by disease, cC disorders or treatments related to the suppression of haematopoiesis. ABQ73288 to ABQ73377 and ABPS1669 to ABPS1696 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                 The invention relates to a novel immunoglobulin molecule or its fragment comprising a region where amino acid residues corresponding to at least a portion of a two complementarity determining regions (CDRs) are replaced with a peptide mimetic selected from an erythropoietin (EPO) mimetic and a thrombopoietin (TPO) mimetic. An immunoglobulin molecule of the invention has immunosuppressive activity, and may have a use in immunotherapy. The immunoglobulin molecule is useful for diagnosing or treating thrombocytopenia as a result of chemotherapy, bone marrow transplantation, or chronic diseases such as idiopathic thrombocytopenia.
                                                                                                                                                                                                                                                                                                                                                                      New immunoglobulin molecule comprising a region, where two complementarity determining regions (CDRs) are replaced wi or a TPO mimetic, useful for treating thrombocytopenia.

commettic such as an erythropic tin (BPO) or thrombopoietin (TPO) mimetic, that is flanked with proline at its carboxy terminus. (I) has can stimulator of proliferation, differentiation and maturation of constitutive calls, and a stimulator of proliferation, differentiation and maturation of constitution proliferation, differentiation and maturation of constitution proliferation, differentiation or growth of promegakaryocytes or megakaryocytes, where (I) is contacted with corresponding to a portion of CDR is replaced with an EPO mimetic, or which has one or comore of its CDRs fused to an EPO mimetic, is useful for increasing the production of red blood calls, where (I) is contacted with has one or therapeutics, in cell isolation strategies, and for treating patients suffering from deficiency in cell populations caused by disease, considers or treatments related to the suppression of haematopoiesis. ABQ73288 to ABQ73377 and ABP51669 to ABP51696 represent sequences used in the exemplification of the present invention

CC (I) comprising a region where amino acid residues corresponding to at the frequency of the comprising aregion (CDR) are CC replaced or fused with biologically active peptides e.g. a peptide CC mimetic such as an erythropoietin (EPO) or thrombopoietin (FPO) mimetic, that is flanked with proline at its carboxy terminus. (I) has CC antianaemic, haemostatic and nephrotropic activities, and can be used as CC as timulator of proliferation, differentiation and maturation of CC haematopoietic cells, and a stimulator of haematopoiesis. (I) is useful CC promegakaryocytes or megakaryocytes, where (I) is contacted with CC promegakaryocytes or megakaryocytes, where (I) is contacted with CC promegakaryocytes or megakaryocytes, which results in increased platelet CC promegakaryocytes or megakaryocytes, which results in increased platelet CC promegakaryocytes or megakaryocytes, which results in increased platelet CC production. (I) with a region where amino acid residues corresponding to CC a portion of CDR is replaced with an EPO mimetic, or which has one or CC more of its CDRs fused to an EPO mimetic, is useful for increasing the CC production of red blood cells, where (I) is contacted with haematopoietic Stem cells or their progenitors. (I) is useful for increasing the CC stem cells or their progenitors. (I) is useful for diagnostics or CC therapeutics, in cell isolation strategies, and for treating patients Suffering from deficiency in cell populations caused by disease, CC AB073288 to AB073377 and ABP51669 to ABP51696 represent sequences used in the exemplification of the present invention
                                                                                                                                  Query Match

The present invention describes an immunoglobin molecule or its fragment CC (I) comprising a region where amino acid residues corresponding to at CC least a portion of the complementary determining region (CDR) are CC replaced or fused with biologically active peptides e.g. a peptide CC mimetic such as an erythropoietin (EPO) or thrombopoietin (TPO) mimetic, that is flanked with proline at its carboxy terminus. (I) has CC antianaemic, haemostatic and nephrotropic activities, and can be used as stimulator of proliferation, differentiation and maturation of CC haematopoietic cells, and a stimulator of haematopoiesis. (I) is useful CC promegakaryocytes or megakaryocytes, where (I) is contacted with CC promegakaryocytes or megakaryocytes, which results in increased platelet CC production. (I) with a region where amino acid residues corresponding to CC a portion of CDR is replaced with an EPO mimetic, or which has one or CC more of its CDRs fused to an EPO mimetic, is useful for increasing the CC production of red blood cells, where (I) is useful for increasing the CC stem cells or their progenitors. (I) is useful for diagnostics or CC therapeutics, in cell isolation strategies, and for treating patients suffering from deficiency in cell populations caused by disease, CC disorders or treatments related to the suppression of haematopoiesis. CC ABQ73288 to ABQ73377 and ABP51669 to ABP51696 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    05-DEC-2000;

                                                                                                      for stimulating proliferation, differentiation or growth of promegakaryocytes or megakaryocytes, where (I) is contacted with promegakaryocytes or megakaryocytes, which results in increased platelet production. (I) with a region where amino acid residues corresponding to a portion of CDR is replaced with an EPO mimetic, or which has one or more of its CDRs fused to an EPO mimetic, is useful for increasing the production of red blood cells, where (I) is contacted with haematopoietic stem cells or their progenitors. (I) is useful for diagnostics or therapeutics, in cell isolation strategies, and for treating patients suffering from deficiency in cell populations caused by disease, disorders or treatments related to the suppression of haematopoiesis. ABQ73288 to ABQ73377 and ABP51669 to ABP51696 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                            (1) comprising a region where amino acid residues corresponding to at least a portion of the complementary determining region (CDR) are replaced or fused with biologically active peptides e.g. a peptide mimetic such as an erythropoietin (BPO) or thrombopoietin (TPO) mimetic, that is flanked with proline at its carboxy terminus. (I) has antianaemic, haemostatic and nephrotropic activities, and can be used as a stimulator of proliferation, differentiation and maturation of haematopoietic cells, and a stimulator of haematopoiesis. (I) is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A novel immunogen molecule comprising a region in which amino acid residues corresponding to at least a portion of the complementary determining region are replaced or fused with an erythropoietin or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         05-DEC-2000; 2000US-0251448P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                   CC (I) comprising a region where amino acid residues corresponding to at at C least a portion of the complementary determining region (CDR) are CC replaced or fused with biologically active peptides e.g. a peptide CC mimetic such as an erythropoletin (EPO) or thrombopoletin (TPO) mimetic, CC that is flanked with proline at its carboxy terminus. (I) has CC antianaemic, haemostatic and nephrotropic activities, and can be used as Ethmulator of proliferation, differentiation and maturation of CC haematopoletic cells, and a stimulator of haematopoiesis. (I) is useful CC promegakaryocytes or megakaryocytes, where (I) is contacted with CC promegakaryocytes or megakaryocytes, which results in increased platelet CC production. (I) with a region where amino acid residues corresponding to CC a portion of CDR is replaced with an EPO mimetic, or which has one or CC more of its CDRs fused to an EPO mimetic, is useful for increasing the CC production of red blood cells, where (I) is contacted with haematopoietic Stem cells or their progenitors. (I) is useful for diagnostics or CC therapeutics, in cell isolation strategies, and for treating patients suffering from deficiency in cell populations caused by disease, CC disorders or treatments related to the suppression of haematopoiesis. (C hae73288 to AB073377 and ABP51669 to ABP51696 represent sequences used in

                           The present invention describes an immunoglobin molecule or its fragment ((1) comprising a region where amino acid residues corresponding to at ((1) comprising a region where amino acid residues corresponding to at ((1) comprising a region where amino acid residues corresponding to at ((1) comprising a population of the complementary determining region (CDR) are ((1) complementary determining region (CDR) are ((1) complementary determining region (CDR) are ((1) complementary determines). ((1) has ((1) has a complementary determines). ((1) has a stimulator of proliferation, differentiation and maturation of ((1) has a complementary determines). ((1) is contacted with ((1) compregakaryocytes or megakaryocytes, where ((1) is contacted with ((1) compregakaryocytes) or megakaryocytes, which results in increased platelet ((1) production. ((1) with a region where amino acid residues corresponding to ((1) complementary determines). ((1) has one or ((2) contacted with has one or ((2) contacted with has one or ((2) contacted with has determined or ((2) contacted with h
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A novel immunogen molecule comprising a region in which amino acid residues corresponding to at least a portion of the complementary determining region are replaced or fused with an erythropoietin or thrombopoetin mimetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 20;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bowdish
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 05-DEC-2000; 2000US-0251448P

The present invention describes an immunoglobin molecule or its fragment (CI) comprising a region where amino acid residues corresponding to at CI least a portion of the complementary determining region (CDR) are CI replaced or fused with biologically active peptides e.g. a peptide CI mimetic such as an erythropoietin (EPO) or thrombopoietin (TPO) mimetic, CI that is flanked with proline at its carboxy terminus. (I) has essential and nephrotropic activities, and can be used as a stimulator of proliferation, differentiation and maturation of CI as a stimulator of proliferation, differentiation or growth of CI promegakaryocytes or megakaryocytes, where (I) is contacted with CI promegakaryocytes or megakaryocytes, which results in increased platelet production. (I) with a region where amino acid residues corresponding to a portion of CDR is replaced with an EPO mimetic, or which has one or CI aportion of red blood cells, where (I) is contacted with has one or CI stem cells or their progenitors. (I) is useful for increasing the corresponding to a new collist on their progenitors. (I) is useful for diagnostics or therapeutics, in cell isolation strategies, and for treating patients suffering from deficiency in cell populations caused by disease, CI abg73288 to Abg73377 and Abp51669 to Abp51696 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                      Best
                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                          comprising a region where amino acid residues corresponding to at least a portion of a two complementarity determining regions (CDRs) are replaced with a peptide mimetic selected from an erythropoletin (EPO) mimetic and a thrombopoletin (TPO) mimetic. An immunoglobulin molecule of the invention has immunosuppressive activity, and may have a use in immunotherapy. The immunoglobulin molecule is useful for diagnosing or creating thrombocytopenia as a result of chemotherapy, bone marrow transplantation, or chronic diseases such as idiopathic thrombocytopenia. The present sequence represents a TPO mimetic peptide with flanking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New immunoglobulin molecule comprising a region, where two complementarity determining regions (CDRs) are replaced wit or a TPO mimetic, useful for treating thrombocytopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             09-SEP-2004

                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a novel immunoglobulin molecule or its fragment comprising a region where amino acid residues corresponding to at least a portion of a two complementarity determining regions (CDRs) are replaced with a peptide mimetic selected from an erythropoietin (EPO) mimetic and a thrombopoietin (TPO) mimetic. An immunoglobulin molecule of the invention has immunosuppressive activity, and may have a use in immunotherapy. The immunoglobulin molecule is useful for diagnosing or treating thrombocytopenia as a result of chemotherapy, bone marrow transplantation, or chronic diseases such as idiopathic thrombocytopenia.
                                                                                                                                                                                                                                                                                                                                                    Sequence 18 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New immunoglobulin molecule comprising a region, where two complementarity determining regions (CDRs) are replaced with or a TPO mimetic, useful for treating thrombocytopenia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TPO mimetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              09-SEP-2004
